

Driving business sustainability

one2five®

Energetics One2Five Sustainability diagnostic management tool helps businesses to examine sustainability as a strategic business management issue. A sustainability diagnostic session identifies an organisation's strengths and areas requiring improvement on a range of sustainability issues, including environmental sustainable practices in energy, water and waste, supply chain management and stakeholder engagement.

One2Five® Sustainability is designed to help businesses

- Evaluate business risk issues related to environmental sustainability management
- Build effective management systems to control energy, water usage and waste generation
- Drive continuous and sustainable improvement in environmental sustainability management
- Reduce energy, water use and waste generation with a step-by-step process for immediate improvement in environmental sustainability management
- Reduce cost by saving energy, water and reducing waste
- Engage stakeholders through a dynamic interactive workshop with the management team and stakeholders
- Plan and act supported by an immediate action plan

Engaging senior decision makers

One2Five® Sustainability aims to engage senior decision makers at the beginning of the program to increase the likelihood of implementing the improvement actions identified by the diagnostic session. All One2Five® sessions are conducted in an interactive management workshop with the senior management team.

By taking a holistic approach, One2Five® Sustainability helps senior managers to understand the effectiveness of current environmental sustainability practices and identify critical actions for improvement. Additionally, they are provided with a structured framework to achieve continuous improvement in environmental sustainability.

Enhancing your reputation

One2Five® Sustainability provides incentives for businesses to change by reaching star ratings that indicate stages of improvement and achievement. The star levels not only encourage businesses to continuously improve their practices, but also act as a visual indicator of a company's level of environmental excellence. Businesses also use the system to raise their credentials and demonstrate that they are acting responsibly to consumers and stakeholders.

A proven solution

NSW Department of Climate Change (DECC) – Sustainability Advantage - DECC utilises One2Five® Sustainability as an integral element within their Sustainability Advantage Program. The management diagnostic is used by department business advisers to assess participants' management performance.

Zero Waste SA – Energetics supported Zero Waste South Australia (ZWSA). By embedding resource efficiency into standard business processes, ZWSA were able to realise opportunities. The program is currently in its initial phase. Around 25 diagnostic sessions with companies using the One2Five® tools have been completed.

About One2Five®

One2Five® Sustainability is a structured diagnostic session run with the organisation's senior decision makers every 6 to 12 months, providing the opportunity to assess and evaluate your progress. One2Five® Sustainability identifies strengths and weaknesses and provides a critical action plan for business improvement.

All Energetics One2Five® products feature web-based benchmarking which enables your organisation to proactively benchmark its performance between different sites or externally against more than 1,700 users of the One2Five® diagnostics internationally.
