

# Are you prepared for energy price increases from 1st July 2009?

## Energetics helps businesses achieve cost reductions

From the 1st July 2009, there will be an increase in electricity charges across Qld, SA, ACT, Tas, WA and particularly in NSW. Depending on your location, type of business and fuel options the cost increases may be more than 25%.

### Have you budgeted for this in your 2010 financial year?

Energetics can help you:

- Understand the price impact on your business
- Forecast your energy spend
- Conduct opportunity assessment for energy, water and carbon
- Develop a tailored program for identifying opportunities and realising savings in energy, carbon and water.

For over 25 years, Energetics has been partnering with clients to achieve competitive advantage from the top to the bottom line. We have a proven track record to reduce costs and in many cases have managed projects that became cash flow positive within 12 months.

If your business spends more than \$10 million in energy, water and carbon, contact our Client Services Team in your nearest office to find out how effective business processes can help you reduce cost and carbon emissions, or email:
