

# WOULD YOU LIKE TO SAVE MONEY ON YOUR ELECTRICITY INVOICES?

All electricity networks connected to the grid have a range of tariffs that may apply to different sites. What many customers do not realise is that there are no rules that state that the network must apply the most cost effective tariff to your site. There is also no guarantee that your retailer is passing on the tariff that is being applied by the network operator.

If you have sites which are not on contract, significant savings may still be achieved by changing the franchise tariff.

Energetics are experts in understanding the tariffs that apply across all of the grid-connected networks. We can work with you to determine if savings can be made for your sites.

## What Checks do we do?

- **Contract Rate Review** - ensures your negotiated contract rate is correctly passed through from your electricity retailer.
- **Contract Comparison** - determines the savings that are likely to be achieved by transferring any of your franchise sites to a negotiated contract.
- **Tariff Rate Review** - ensures that the published rates for the network charges are being correctly billed by your electricity retailer.
- **Tariff Optimisation** - determines if there is a more cost effective network tariff for each site by comparing the existing tariff costs against the costs of applying other appropriate tariff types within the network area.
- **Demand Review** (for sites with interval data available) - determines if your maximum demand has been correctly applied and contract demands or capacity charges have been correctly reset. Where sites are not currently on a demand tariff they will be evaluated to assess any potential benefits of moving onto a demand-based tariff.

Energetics will provide you with a comprehensive report of the results of our analysis and information regarding the steps you should take to achieve the savings identified. We can also provide you with the cost of implementation if you are interested in outsourcing your energy procurement to Energetics.

## How much could I potentially save?

We cannot guarantee that there will be significant savings for your sites. However, we have identified large savings for many of our clients. Some examples include:

Public Water Utility - identified **\$425,000** potential savings – **17%** of monthly electricity spend.

Commercial property manager - **\$120,000** potential savings – **20%** of monthly electricity spend.

Large Commercial client - **\$330,000** potential savings – **17%** of monthly electricity spend.

Government Department - **\$40,000** potential savings – **89%** of monthly electricity spend.

Retail Chain - **\$305,000** potential savings – **18%** of monthly electricity spend.
